

Healthcare Construction

One goal, one promise: To provide not only what you want, but also what you need.

Zartman Construction has accumulated decades of experience in healthcare construction and renovation with a high reputation for the quality and timeliness of our work.

We have completed more than \$37 million in healthcare construction projects, ranging from emergency rooms to assisted living facilities to miscellaneous repairs.

Zartman offers construction management, design-build and general contracting services for projects of all sizes, whether new construction or renovations to existing spaces. Put our expertise and skilled workforce to work on your next project.

Disruption minimization

We know that construction can be disruptive, especially in a highly regulated, around the clock facility. We will work closely with you to ensure that your daily operations are able to function smoothly for the duration of the project.

Our goal is for minimal inconvenience for your staff and patients throughout the construction process.

No matter the size of the project we will work with you to find the best solution to fulfill all your needs.

ASHE certified

Working in a healthcare facility presents a different set of challenges than working in any other environment. Our team of healthcare construction experts is highly trained and knowledgeable of the latest standards. Members of our project management and operations departments are American Society for Healthcare Engineering (ASHE) certified and are dedicated to building and maintaining safe healthcare environments.

We also have knowledge and experience implementing ICRA requirements.

We have the experience

In 2017, Zartman completed a renovation to Moses Taylor's Advanced Imaging Services facility in Dunmore, so that the region's first open MRI could be installed. In 2014, we completed construction on the new pediatric unit of Moses Taylor Hospital in Scranton. The 18-bed unit features colorful decor and a Ronald McDonald House lounge.

We were part of the team on the Susquehanna Health - Muncy Valley Hospital Emergency Expansion project, completing the concrete, miscellaneous metals and general trades packages. The 14,600 square foot project included replacing five curtained bays with 14 private treatment rooms. The addition included specialty areas for trauma/resuscitation, decontamination and behavioral health evaluation. The hospital remained opened during the project.

Zartman has worked with Evangelical Community Hospital in Lewisburg for over 20 years and has completed over 100 projects for Geisinger over the past fifteen years. We have also completed projects at other area healthcare institutions, including Berwick Hospital, Bloomsburg Hospital, Family Practice Center, HCR Manor Care, Jersey Shore Hospital, Kramm Nursing Home and Rehabilitation, Lock Haven Hospital, Mid Valley Hospital, Sunbury Hospital, SUN Home Health and Hospice, The Eye Center of Central PA, Tyler Memorial Hospital, Watsontown Health and Rehabilitation Center and Zandt Nursing Home.

Sometimes outpromised. Never outperformed.
